

Shot Based Encoding

as a metaphor for inclusion

Sike Ogieva

When a video is processed...

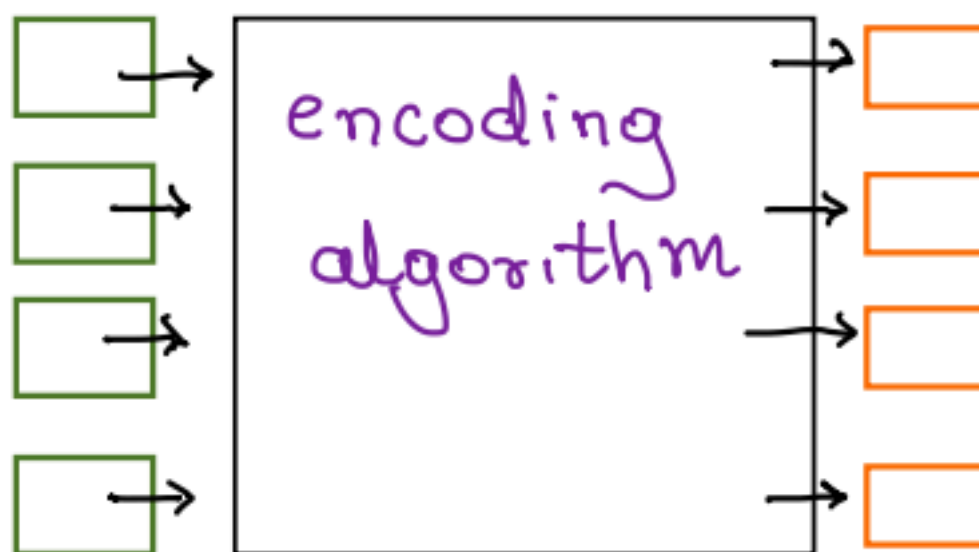

SLICE UP
THE VIDEO ①

②

SLICE UP
THE TIME

How do we slice a video?

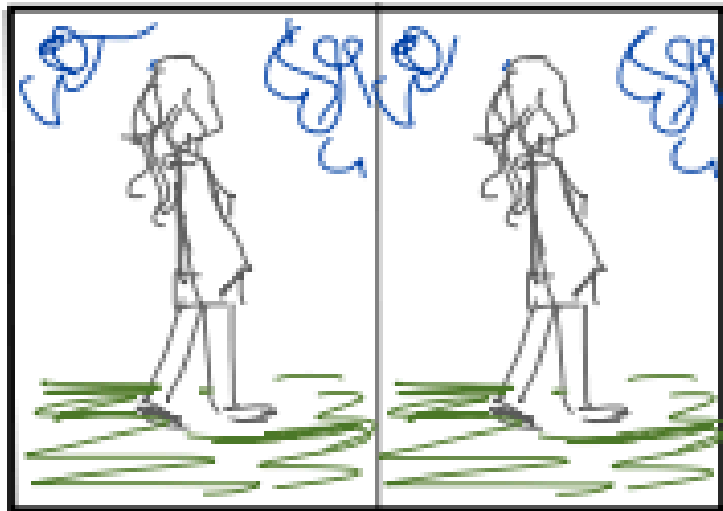

① in equal pieces

② when scenes change

bit rate: 3.5

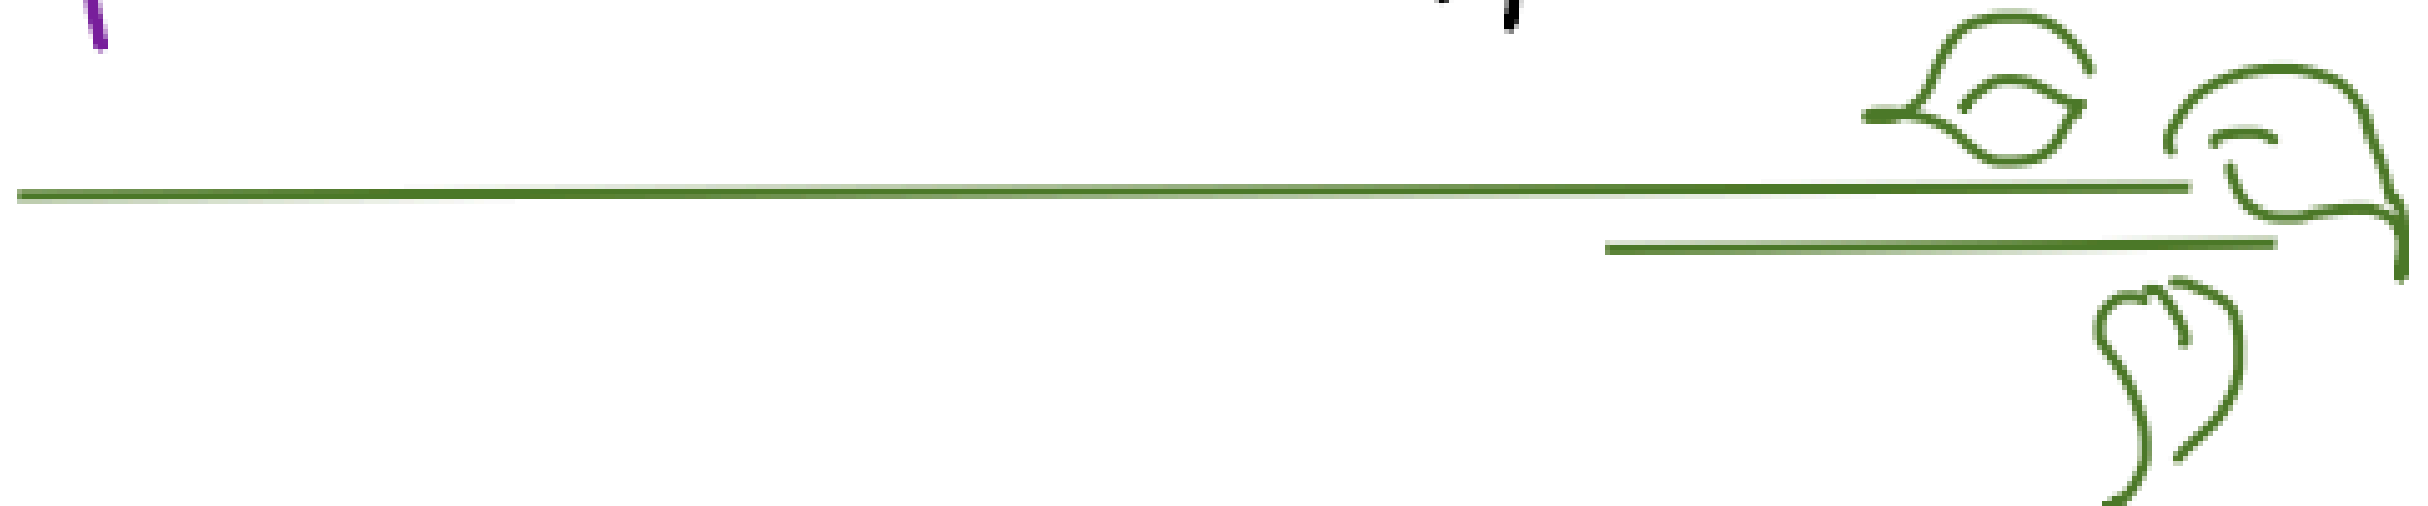

bit
rate: 5.2

Shot-based encoding
lets us apply custom
settings to each custom
chunk

Video Chunks are different.

People are different

Experiences are different

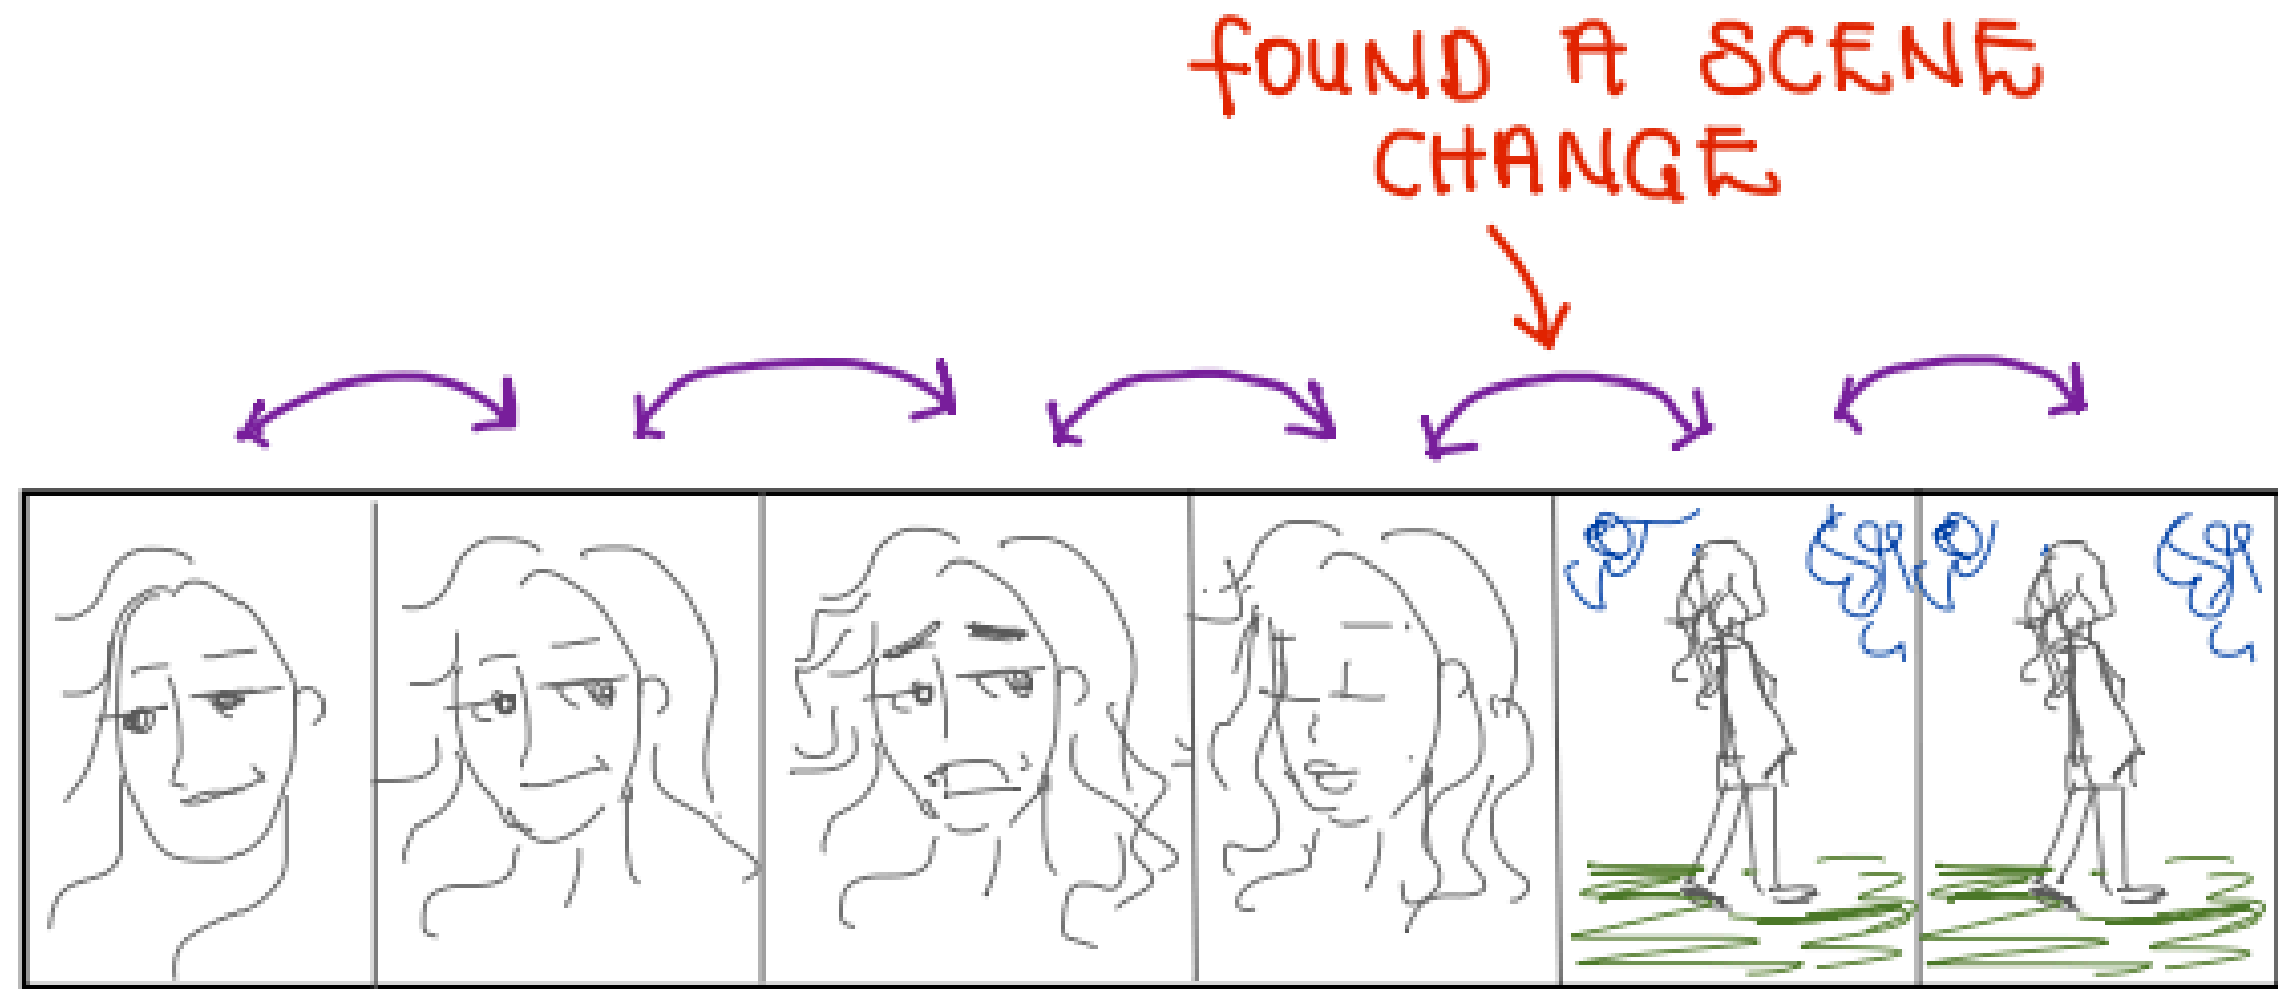

First,

We identify the differences.

Then,

**We thoughtfully give everyone what
each needs to succeed.**

In video processing...

Algorithms that can tell when a scene has changed are
- shot detection algorithms

With people,

???

Questions worth asking.

Shot Based Encoding

as a metaphor for inclusion
